Web Programming

26/05/2009 01:40 by zcomplete

Web programming is the writing of source code to create or develop website. It allows visitors to get interact with website then you are able to collect data from them. For example: questionnaire, web forum, form mail. Web programming is a delicate task which require much attention on discussion and working. We have strong experiences in PHP programming and MySQL which can implement almost everything you can imagine you will put on your website.

Other database type such as Microsoft SQL, Ms Access, Oracle, etc. and other programming languages are possible upon request.
